

GlassBench post-alpha verdict

Preregistered high-k F_s targets become support/reject/indeterminate verdicts once post-window observations exist.

time	verdict stage	residual	decision
tc45	post alpha observation not ready	k=4.79844851031; pred=0.241; obs=0; residual=0	support=0; reject=0; blocker=post_alpha_wir
tc45	post alpha observation not ready	k=5.4; pred=0.239; obs=0; residual=0	support=0; reject=0; blocker=post_alpha_wir
tc45	post alpha observation not ready	k=6; pred=0.236; obs=0; residual=0	support=0; reject=0; blocker=post_alpha_wir
tc50	post alpha observation not ready	k=4.79844851031; pred=0.133; obs=0; residual=0	support=0; reject=0; blocker=post_alpha_wir
tc50	post alpha observation not ready	k=5.4; pred=0.128; obs=0; residual=0	support=0; reject=0; blocker=post_alpha_wir
tc50	post alpha observation not ready	k=6; pred=0.125; obs=0; residual=0	support=0; reject=0; blocker=post_alpha_wir

Current rows are not-ready because post-window F_s observations are not yet available.
