

GlassBench four-member frame-index observables

The first four indexed KA2D trajectory members are aggregated into frame-index observable means and standard errors.

target	uncertainty stage	frame-index observables
KA2D T=0.23	frame index member ensemble uncertainty read	members=4; MSD=0.0070857 +/- 0.0031; chi4=161.88 +/- 52.90 frame=1; Fs(k)=0.999132623291;0.997860348764;0.995481988785 blocker=physical_time_semantics; next=attach_physical_lag_time_and_units
KA2D T=0.30	frame index member ensemble uncertainty read	members=4; MSD=0.0056384 +/- 5.3e-05; chi4=179.47 +/- 2.50 frame=1; Fs(k)=0.999309552953;0.998295928666;0.996398298611 blocker=physical_time_semantics; next=attach_physical_lag_time_and_units

This is a frame-index uncertainty gate only; physical lag times are still required before real inversion.
