

GlassBench trajectory-result timebase bridge

Result time grids are gated before being attached to first-NPZ trajectory frame-index curves.

target	stage	timebase checks
KA2D T=0.23	trajectory result timebase length mismatch	ready=0; frames=20; time points=8; match=0; explicit mapping=0 time grid: GlassBench/KA2D_results/times_0.23.dat; next: derive or fetch trajectory frame time mapping
KA2D T=0.30	trajectory result timebase length mismatch	ready=0; frames=20; time points=6; match=0; explicit mapping=0 time grid: GlassBench/KA2D_results/times_0.30.dat; next: derive or fetch trajectory frame time mapping

Physical-time promotion requires same-temperature time grids, matching counts, and an explicit frame-time mapping; full inversion remains a later gate.
