

Cross-observable prediction ledger

Calibration inputs are separated from held-out predictions and closure variables.

protocol	class	fit	held	closure	risk	held-out predictions
alpha vanhove transport raw curves fit: diffusion;debye waller plateau;anchor tau alpha	predictive diagnostic	3	3	0	0	multi k tau alpha;late ngp;van hove tail r
joint persistence exchange multik fit: diffusion;anchor tau alpha	predictive diagnostic	2	4	0	0	multi k tau alpha;late ngp;stokes einstein
late mechanism selection fit: late ngp point 1;late ngp point 2	predictive diagnostic	2	2	0	0	alpha slope;gaussian recovery class
spatial chi4 front closure fit: tau alpha;diffusion	closure assisted predict	2	2	1	0	chi4 peak;dynamic length
single alpha fit only null fit: tau alpha	underconstrained fit	1	0	0	1	none
thermodynamic entropy boundary fit: configurational entropy;temperature grid	scope boundary	2	2	1	0	heat capacity anomaly;ideal glass transiti
