

GlassBench threshold-sweep payload contract

The contract names the minimum data payload needed before cross-temperature event-clock comparison.

target	payload stage	minimum acquisition contract
KA2D T=0.23	threshold rule revision required	lags=8/3; additional=0; official ladder=1; cache=1 known codes=tc05;tc10;tc15;tc20;tc25;tc30;tc35;tc4; payload=preregistered_nonrecrossing_event_definition blocker=threshold_sensitivity_recrossing_and_repli; next=define_true_time_nonrecrossing_cage_jump_r
KA2D T=0.30	multi lag payload request ready	lags=1/3; additional=2; official ladder=0; cache=0 known codes=tc01; payload=official_multi_lag_member_index_and_particle_c blocker=insufficient_lag_coverage; next=obtain_T0_30_multi_lag_member_index_with_a

The current public cache supports a cold negative canary and names the hot-ladder payload needed next.
