

GlassBench multi-lag particle-cache targets

Official structure-matched time-code ladders specify which NPZ members must be cached before particle event-clock tests.

target	cache-target stage	structure-matched lag ladder
KA2D T=0.23	multi lag particle cache ready event clock axis bl	structure=151; codes=tc05;tc10;tc15;tc20;tc25;tc30;tc35;tc40; members=8; cached=8; official=1; event cl lag span=1.5e+06; blocker=frame_axis_is_isoconfigurational_replicates; next=derive_event_clock_from_structure_n
KA2D T=0.30	official multi lag ladder incomplete	structure=3; codes=tc01; members=1; cached=1; official=0; event clock=0 lag span=0; blocker=official_multi_lag_semantics; next=extend_official_timecode_member_ladder

This target list is a data-acquisition contract, not a completed real trajectory inversion.
