

SOTA claim alignment audit

Source-level claims are mapped to diagnostics, data readiness, and scope boundaries.

source	phenomenon	alignment	support	closure	fit	blocker
kob1995vanhove	cage plateau transient ngp van hove binary Lennard-Jones cooling shows caging, non-Gaussian displacement structure, and van-Hove tail	supported	derived	0	0	uncertainty columns
kob1995intermediate	self intermediate scattering alpha self-intermediate scattering has plateau and alpha relaxation with temperature-dependent shape	supported	derived	0	0	uncertainty columns
hedges2007persistenc	persistence exchange decoupling persistence and exchange clocks decouple in atomistic glass formers	supported	derived	0	0	machine readable joint c
lacevic2003fourpoint	chi4 peak and dynamic length growth four-point correlations reveal growing dynamic heterogeneity and a dynamic length scale	partial	effective closure	1	0	shared transport and fou
berthier2024experime	experimental dynamic heterogeneity machine-learning transfer predicts dynamic heterogeneity near experimental glass transition	partial	effective closure	1	0	trajectory level chi4 in
guan2014fickian	fickian non gaussian diffusion hard-sphere colloids can be Fickian while retaining non-Gaussian displacement distributions	supported	derived	0	0	digitized uncertainty we
angell1995formation	fragility growth fragile glass formers show rapidly growing apparent activation on cooling	partial	effective closure	1	0	material specific barrie
kauzmann1948nature;a	configurational entropy and ideal g entropy extrapolation and Adam-Gibbs relaxation connect thermodynamics to slowdown	scope boundary	closure only	1	0	thermodynamic input law
