

GlassBench censored-window claim audit

The public window can support alpha-anchor diagnostics while late recovery and mechanism rejection remain censored.

target	claim audit stage	allowed public claims
KA2D T=0.23	alpha anchor ready late recovery censored	public max=tc40; target=tc50; alpha=1; late=0; reject-static=0 public/target lag=0.009036; target/public=111; tau_alpha=1.5e+06 claim level=alpha anchor and pre late dynamic signatures blocker=public_glassbench_timecode_ceiling; next=obtain_new_glassbench_export_or_trajectory_beyond
KA2D T=0.30	finite exchange envelope upstream incomplete	public max=tc01; target=none; alpha=0; late=0; reject-static=0 public/target lag=0; target/public=0; tau_alpha=0 claim level=short window canary only blocker=finitite_exchange_envelope; next=complete_finitite_exchange_envelope_before_censore
KA2D T=0.30	finite exchange envelope upstream incomplete	public max=tc01; target=none; alpha=0; late=0; reject-static=0 public/target lag=0; target/public=0; tau_alpha=0 claim level=short window canary only blocker=finitite_exchange_envelope; next=complete_finitite_exchange_envelope_before_censore

This is a claim-scope gate: it permits public-window alpha diagnostics but not late Gaussian recovery or thermodynamic claims.
