

GlassBench first-NPZ structural-observable plan

Coordinate schema and implemented trajectory observables are separated from the missing raw first-NPZ bytes.

target	compute stage	coordinate-to-observable status
KA2D T=0.23	coordinate schema ready positions bytes missi	schema=1; raw bytes=0; after extraction=1; immediate=0; frames=20; npz=465710 bytes protocol: msd;ngp 2d;self intermediate scattering by k;chi4 overlap remaining: lag time; next: extract first npz positions box types;run trajectory observa
KA2D T=0.30	coordinate schema ready positions bytes missi	schema=1; raw bytes=0; after extraction=1; immediate=0; frames=20; npz=444786 bytes protocol: msd;ngp 2d;self intermediate scattering by k;chi4 overlap remaining: lag time; next: extract first npz positions box types;run trajectory observa

The current cache is sufficient to prove computability after extraction, not to claim that F_s or chi4 have already been measured.
