

GlassBench real-observable renewal canary

Real structure-matched MSD, NGP, and multi-k Fs reject treating lag codes as a single renewal event clock.

target	canary verdict	real-observable constraints
KA2D T=0.23 s=151	real observable ladder rejects naive lag clock	lags=8; max NGP=7.27; max Fs decay=0.311; q_eff CV=1.76; q_eff span=899 blocker=event_clock_segmentation_required; next=segment_particle_cage_jumps_instead_o
KA2D T=0.30 s=3	real observable ladder incomplete	lags=1; max NGP=0.0124; max Fs decay=0.00321; q_eff CV=inf; q_eff span=inf blocker=structure_matched_lag_ladder; next=cache_more_structure_matched_lag_members

This is a real-data falsification canary for a naive lag-clock closure, not a completed event-clock inversion.
