

Inversion identifiability audit

Pre-fit rank, held-out prediction, closure, and degeneracy checks prevent fit-only overclaims.

protocol	class	fit	par	rank	held	closure	risk	held-out predictions
scattering transport inversion params: cage variance;jump variance;renewal rate	identifiable prediction	3	3	0	3	0	0	ngp peak height;ngp peak time;late g
full observable inversion params: cage variance;jump variance;renewal rate;renewal delay	identifiable prediction	4	4	0	2	0	0	tau alpha;multi k alpha shape
joint persistence exchange multik params: exchange time;persistence time	identifiable prediction	2	2	0	4	0	0	multi k tau alpha;late ngp;stokes ei
single alpha fit only null params: exchange time;persistence time	underidentified fit	1	2	-1	0	0	1	none
static vs finite exchange late win params: static shape;exchange ratio	degenerate fit	3	2	1	1	0	1	gaussian recovery class
spatial chi4 front closure params: correlation length;front diffusivity	conditionally identifiable	3	2	1	1	1	0	dynamic length
thermodynamic entropy boundary params: kauzmann temperature;entropy slope	scope boundary	2	2	0	2	1	0	heat capacity anomaly;ideal glass tr
