

GlassBench observable coverage audit

Frame-index MSD/NGP rows are gated before being used as real persistence/exchange inversion inputs.

target	observable stage	coverage evidence
KA2D T=0.23	required observable set incomplete	ready=0; coverage=0; semantics=0; proxy substitution=0; frames=20 available: frame index;msd;ngp 2d;self intermediate scattering by k;chi4 overlap missing: lag time; next: compute lag time;do not substitute rhomax or ml feat
KA2D T=0.30	required observable set incomplete	ready=0; coverage=0; semantics=0; proxy substitution=0; frames=20 available: frame index;msd;ngp 2d;self intermediate scattering by k;chi4 overlap missing: lag time; next: compute lag time;do not substitute rhomax or ml feat

Proxy rhomax or ML-feature result curves are not substitutes for lag time, multi-k F_s, overlap chi4, and direct semantics.
