

GlassBench first-NPZ SOTA inversion readiness

Frame-index curves are gated before physical-time, ensemble, and uncertainty-weighted comparisons.

target	stage	requirements and next action
KA T=none	upstream curve incomplete	ready=0; physical=0; ensemble=0; uncertainty=0; frames=0; members=0 missing obs: lag time next: complete first npz observable curve
KA2D T=0.23	frame index curve only	ready=0; physical=0; ensemble=0; uncertainty=0; frames=20; members=1 missing obs: lag time next: attach physical lag time and units
KA2D T=0.30	frame index curve only	ready=0; physical=0; ensemble=0; uncertainty=0; frames=20; members=1 missing obs: lag time next: attach physical lag time and units

No row is promoted to a real SOTA inversion until lag-time, ensemble members, Fs/chi4 observables, and positive uncertainties are present.
