

GlassBench public-window SOTA verdict

Each literature-level dynamic signature is mapped to what the currently public GlassBench window can and cannot test.

signature	public-window verdict	claim boundary
chi4 dynamic heterogeneity prox	public proxy consistent spatial bounda	claim=1; late=0; mechanism=0; model=0.5; lit=1 allowed=qualitative dynamic heterogeneity proxy only blocker=direct_four_point_function_and_dyn; public/target=0.009036
late gaussian recovery	public window censored sota unresolved	claim=0; late=1; mechanism=0; model=1; lit=1 allowed=sota consistent but late recovery censored blocker=public_glassbench_timecode_ceiling; public/target=0.009036
msd growth cage escape	public window sota consistent	claim=1; late=0; mechanism=0; model=1; lit=1 allowed=alpha anchor and pre late dynamic signatures blocker=none; public/target=0.009036
persistence exchange decoupling	mechanism selection censored unresolve	claim=0; late=1; mechanism=0; model=1; lit=1 allowed=literature consistent but real mechanism selection censored blocker=public_glassbench_timecode_ceiling; public/target=0.009036
self intermediate alpha	public window sota consistent	claim=1; late=0; mechanism=0; model=1; lit=1 allowed=alpha anchor and pre late dynamic signatures blocker=none; public/target=0.009036
thermodynamic transition	scope boundary not tested	claim=0; late=0; mechanism=0; model=0; lit=1 allowed=not a thermodynamic glass transition test blocker=thermodynamic_scope_boundary; public/target=0.009036
transient ngp peak	public window sota consistent	claim=1; late=0; mechanism=0; model=1; lit=1 allowed=alpha anchor and pre late dynamic signatures blocker=none; public/target=0.009036

The verdict permits public-window dynamical consistency checks, not complete late-recovery, mechanism-selection, or thermodynamic claims.
