

GlassBench cage-jump proxy canary

Aggregate frame-index MSD, NGP, and Fs decay mark jump-like candidates; particle-resolved event clocks remain blocked.

target	canary stage	aggregate proxy status
KA2D T=0.23	aggregate cage jump proxy ready particle eve	proxy=1; particle events=0; physical clock=0; blocker=particle_resolved_displacements peak frame=3; proxy jump length=0.0793; score=3.6e-05; short Fs decay=0.0048 missing=particle_resolved_displacements;physical_time_semantics;cage_identity_tracking;per
KA2D T=0.30	aggregate cage jump proxy ready particle eve	proxy=1; particle events=0; physical clock=0; blocker=particle_resolved_displacements peak frame=4; proxy jump length=0.0728; score=3.5e-05; short Fs decay=0.0036 missing=particle_resolved_displacements;physical_time_semantics;cage_identity_tracking;per

This canary is an aggregate trajectory proxy only; it does not replace particle-resolved cage-jump segmentation.
