

GlassBench short-window real-data canary

Real first-NPZ frame-index curves are allowed to support a short-window MSD/NGP sanity check only.

comparison	stage	canary values
KA2D 0.23->0.30	short window real data canary ready inversi	ready=1; inversion=0; thermodynamic=0; hot/cold MSD=1.36 peak NGP cold/hot=(0.15, 0.179); frames=20; blocker=physical time ensemble uncertainty

This canary does not supply lag-time units, multi-member uncertainties, $F_s(k,t)$, χ_4 , alpha relaxation, or thermodynamic evidence.
