

GlassBench interval-censored waiting-law selection

Exponential and Weibull persistence laws are compared with an AIC penalty before claiming stretched waiting times.

target	selection stage	waiting-law comparison
KA2D T=0.23	exponential waiting law not rejected sparse cache	structure=151; Weibull shape=1.06; extra parameter supported=0 AIC exponential=3.27; AIC Weibull=5.26; delta exp-minus-Weibull=-2 blocker=sparse_interval_censoring; next=extend_interval_censored_event_clock_before_
KA2D T=0.30	waiting law selection upstream incomplete	structure=3; Weibull shape=0; extra parameter supported=0 AIC exponential=0; AIC Weibull=0; delta exp-minus-Weibull=0 blocker=interval_censored_persistence_fit; next=complete_interval_censored_persistence_fit
KA2D T=0.30	waiting law selection upstream incomplete	structure=none; Weibull shape=0; extra parameter supported=0 AIC exponential=0; AIC Weibull=0; delta exp-minus-Weibull=0 blocker=interval_censored_persistence_fit; next=complete_interval_censored_persistence_fit

The current cached GlassBench row constrains the waiting-time law but does not justify an extra stretched-law parameter.
