

GlassBench threshold-sweep outcome matrix

Pass and fail interpretations are preregistered before acquiring the missing threshold-sweep payload.

target	outcome stage	preregistered decision rule
KA2D T=0.23	awaiting event rule preregistered outcome	required=nonrecrossing_event_definition_on_true_time_axis pass=mean_persistence_sensitivity_ratio <= 1.5 and max_post_crossing_recross_fraction pass claim=threshold_robust_event_clock_candidate_not; fail claim=fixed_lag_threshold_event_clock_reject scope=dynamical_event_clock_diagnostic_only; thermodynamic=0
KA2D T=0.30	awaiting payload preregistered outcome	required=multi_lag_threshold_sweep_on_physical_time_axis pass=mean_persistence_sensitivity_ratio <= 1.5 and max_post_crossing_recross_fraction pass claim=threshold_robust_event_clock_candidate_not; fail claim=fixed_lag_threshold_event_clock_reject scope=dynamical_event_clock_diagnostic_only; thermodynamic=0

Passing this gate can only promote an event-clock candidate; PE inversion and thermodynamic claims remain blocked.
