

# SOTA remote result-curve payload adapter

Cached GlassBench numeric payloads are paired into time/rhox structural rows before any model inversion is claimed.

| system | T    | role    | stage                                                                                            | pts | align | struct | real | blocker      |
|--------|------|---------|--------------------------------------------------------------------------------------------------|-----|-------|--------|------|--------------|
| KA     | 0.44 | rhox_md | <div>range curve payload parse blocke</div> <div>GlassBench/KA_results/rhox_T0.44_MD.dat</div>   | 10  | 0     | 0      | 0    | numeric rows |
| KA     | 0.50 | rhox_md | <div>range curve value missing</div> <div>none</div>                                             | 0   | 0     | 0      | 0    | rhox md      |
| KA     | 0.56 | rhox_md | <div>range curve value missing</div> <div>none</div>                                             | 0   | 0     | 0      | 0    | rhox md      |
