

# GlassBench late recovery falsification protocol

Late-NGP or van-Hove recovery observations are classified as finite-exchange support, rejection, or acquisition-required.

| target      | protocol stage                             | mechanism falsification state                                                                                                                                                                                                          |
|-------------|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Current GlassBench rows remain acquisition-required until a sufficiently late recovery observable is measured.
