

GlassBench cached alpha-anchor Fs audit

Structure-matched cached displacements directly test the proposed higher-k alpha anchor.

target	cached stage	direct cached Fs measurement
KA2D T=0.23	cached anchor measurement refines required k	structure=151; lag=1.5e+06; candidate k=2.7; cached Fs=0.528 cached k*=3.01; k*/candidate=1.12; crossed=0; blocker=cached_structure_anchor_wave_number_higher_than_protocol next=recompute_cached_fs_near_structure_specific_threshold_wave_number
KA2D T=0.30	cached anchor upstream incomplete	structure=none; lag=0; candidate k=0; cached Fs=0 cached k*=0; k*/candidate=0; crossed=0; blocker=alpha_anchor_rescue_design next=complete_alpha_anchor_rescue_design_before_cached_fs_audit

A cached structure-specific refinement remains a dynamical alpha-anchor check, not an event-clock or thermodynamic claim.
