

GlassBench real threshold-sweep canary

The fixed-lag crossing candidate is swept over jump thresholds before event-clock promotion.

target	threshold stage	threshold-sensitivity diagnostics
KA2D T=0.23	real threshold sweep sensitive replica axis bloc	thresholds=0.5;0.75;1;1.25;1.5; crossed=0.181-0.333; mean ratio=2.03 anchor tau_p/tau_alpha=3.64; max recross=0.256; axis0 replica=1 blocker=threshold_sensitivity_recrossing_and_repli; next=extract_true_time_axis_and_preregister_sta

Threshold sensitivity and recrossing block promotion from fixed-lag crossing target to robust event clock.
