

SOTA GlassBench trajectory payload locator

Remote central-directory entries are resolved to concrete trajectory payload files before byte-range extraction or PE inversion is claimed.

target	stage	located	range	real	blocker
KA T=none	remote trajectory payload missi	0	0	0	trajectory payload
	path: none				
	format=none; range-supported=1; entry-metadata=0; full-cache=0				
KA2D T=0.23	remote trajectory payload locat	1	0	0	zip entry metadata
	path: GlassBench/KA2D_trajectories/T0.23.tar.xz				
	format=tar.xz; range-supported=1; entry-metadata=0; full-cache=0				
KA2D T=0.30	remote trajectory payload locat	1	0	0	zip entry metadata
	path: GlassBench/KA2D_trajectories/T0.30.tar.xz				
	format=tar.xz; range-supported=1; entry-metadata=0; full-cache=0
