

SOTA experimental verdict matrix

Literature trends, GlassBench support, microdynamic predictions, and scope boundaries are collapsed into manuscript-safe verdicts.

verdict row

stage

evidence flags

allowed claim / blocker

sota dynamic signature support

sota dynamic signatures supported

lit=1; real=1; micro=0; reject=0; thermo=0

dynamical signature supported
blocker=none

sota mechanism selection

mechanism selection protocol supported

lit=1; real=0; micro=1; reject=1; thermo=0

mechanism selection protocol supported
blocker=none

sota real glassbench closed loop

real glassbench closed loop blocked

lit=0; real=1; micro=0; reject=0; thermo=0

real signature support preinversion
blocker=physical time semantics

sota thermodynamic boundary

thermodynamic transition out of scope

lit=1; real=0; micro=0; reject=0; thermo=0

dynamical theory only
blocker=thermodynamic input law

The verdict permits dynamical-signature and mechanism-diagnostic claims while blocking real closed-loop and thermodynamic-transition overclaims.
