

GlassBench post-alpha prediction targets

Held-out multi-k alpha prediction is converted into tc45/tc50 high-k F_s targets with falsification bands.

time	target stage	prediction	status
tc45	post alpha prediction target preregistered	k=4.8; beta=0.149; Fs=0.241; band=[0.17,0.343]	lag=1.58e+07; blocker=post_alpha_window_
tc45	post alpha prediction target preregistered	k=5.4; beta=0.153; Fs=0.239; band=[0.168,0.339]	lag=1.58e+07; blocker=post_alpha_window_
tc45	post alpha prediction target preregistered	k=6; beta=0.156; Fs=0.236; band=[0.166,0.335]	lag=1.58e+07; blocker=post_alpha_window_
tc50	post alpha prediction target preregistered	k=4.8; beta=0.149; Fs=0.133; band=[0.0935,0.188]	lag=1.66e+08; blocker=post_alpha_window_
tc50	post alpha prediction target preregistered	k=5.4; beta=0.153; Fs=0.128; band=[0.0904,0.182]	lag=1.66e+08; blocker=post_alpha_window_
tc50	post alpha prediction target preregistered	k=6; beta=0.156; Fs=0.125; band=[0.0878,0.177]	lag=1.66e+08; blocker=post_alpha_window_

These rows are prediction targets only; observed post-window F_s is still missing.
