

GlassBench direct four-point claim gate

Overlap-chi4 evidence remains a proxy until direct four-point susceptibility and dynamic length are both available.

target	claim stage	promotion guard
KA2D T=0.23	overlap chi4 proxy supported direct four point blo	proxy=1; direct4pt=0; length=0; promote=0; chi4=162; sigma=57.9 members=4; physical time=0; blocker=direct four point function and dynamic lengt
KA2D T=0.30	overlap chi4 proxy supported direct four point blo	proxy=1; direct4pt=0; length=0; promote=0; chi4=179; sigma=7.16 members=4; physical time=0; blocker=direct four point function and dynamic lengt

The gate prevents overlap-density or chi4-proxy evidence from being promoted to a direct spatial four-point theory.
