

GlassBench late recovery cache request

The tc50 target is converted into an inferred NPZ member path while preserving official metadata and cache gaps.

target	cache contract stage	late-recovery member request
KA2D T=0.23	late recovery member metadata required	structure=151; target=tc50; lag=1.66e+08; metadata=0; cache=0; observable=0 member=T0.23/test/N1290T0.23_151_tc50.npz blocker=late_recovery_npz_member_metadata; next=verify_glassbench_archive_contains_time_code
KA2D T=0.30	late recovery timecode target incomplete	structure=3; target=none; lag=0; metadata=0; cache=0; observable=0 member=none blocker=late_recovery_timecode_target; next=complete_late_recovery_timecode_target
KA2D T=0.30	late recovery timecode target incomplete	structure=none; target=none; lag=0; metadata=0; cache=0; observable=0 member=none blocker=late_recovery_timecode_target; next=complete_late_recovery_timecode_target

The inferred tc50 path is a request contract: official member metadata and particle cache remain missing.
