

GlassBench late recovery ingestion contract

Candidate late-recovery observations must be machine-readable, uncertainty-weighted, and beyond the required lag horizon.

target	ingestion stage	required observation schema
KA2D T=0.23	late recovery observation missing	structure=151; required lag=4.3e+07; observed lag=0; ingest ready=0 machine=0; shared time=0; horizon=0; uncertainty=0 blocker=late_recovery_observation; next=provide_machine_readable_late_recovery_obser
KA2D T=0.30	late recovery envelope upstream incomplete	structure=3; required lag=0; observed lag=0; ingest ready=0 machine=0; shared time=0; horizon=0; uncertainty=0 blocker=finites_exchange_envelope; next=complete_finites_exchange_falsification_envel
KA2D T=0.30	late recovery envelope upstream incomplete	structure=none; required lag=0; observed lag=0; ingest ready=0 machine=0; shared time=0; horizon=0; uncertainty=0 blocker=finites_exchange_envelope; next=complete_finites_exchange_falsification_envel

The current GlassBench row lacks a late-recovery observation at the required horizon with uncertainty columns.
