

GlassBench held-out multi-k alpha prediction

Each high-k alpha curve is held out and predicted from the other two before any real alpha-shape claim is promoted.

target	held-out stage	prediction residuals
KA2D T=0.23	cached multik heldout prediction window edge blo	structure=151; held-out k=4.79844851031;5.4;6; held=3/3 max beta error=0.00995; max shape RMSE=0.226; edge crossings=1 blocker=post_alpha_window_depth; next=extend_cached_lag_window_beyond_alpha_cros

Passing held-out residuals create a candidate, but tc40 edge crossings keep the real claim blocked.
