

GlassBench late recovery membership probe

The extended tar-prefix member index is checked before claiming that the tc50 target can be cached.

target	membership stage	extended-prefix evidence
KA2D T=0.23	late recovery target absent from extended prefix	structure=151; target=tc50; visible=0; same-structure=8; max visible=tc40 compressed prefix=1.26e+07; tar probe=2.52e+07; codes=tc05;tc10;tc15;tc20;tc25;tc30;tc35;tc40 blocker=late_recovery_member_index_depth; next=extend_glassbench_tar_prefix_probe_for_struc
KA2D T=0.30	late recovery cache request incomplete	structure=3; target=none; visible=0; same-structure=1; max visible=tc01 compressed prefix=8.39e+06; tar probe=4.19e+06; codes=tc01 blocker=late_recovery_cache_request; next=complete_late_recovery_cache_request_contrac
KA2D T=0.30	late recovery cache request incomplete	structure=none; target=none; visible=0; same-structure=0; max visible=none compressed prefix=0; tar probe=0; codes=none blocker=late_recovery_cache_request; next=complete_late_recovery_cache_request_contrac

For KA2D T=0.23, the extended prefix verifies tc05-tc40 for structure 151 but does not expose tc50.
