

GlassBench time-code signature support

Real KA2D time-code curves are scored for dynamical signatures before persistence/exchange inversion is claimed.

target	signature stage	real-curve dynamical support
KA2D T=0.23	real curve dynamic signature support preinv	supported=4/4; real curve=1; PE inversion=0; blocker=alpha_threshold_crossing MSD growth=340; Fs decay=0.236; alpha crossed=0 NGP peak t=1.426e+05, recovery=0.63; chi4 peak t=1.426e+05, recovery=0.45 next=extend_timecode_curve_until_alpha_threshold_crossing
KA2D T=0.30	timecode curve upstream incomplete	supported=0/4; real curve=0; PE inversion=0; blocker=sparse_time_code_coverage MSD growth=0; Fs decay=0; alpha crossed=0 NGP peak t=0, recovery=0.00; chi4 peak t=0, recovery=0.00 next=complete_timecode_curve_before_signature_scoring

The score supports dynamical glass signatures only; thermodynamic glass-transition claims remain disallowed.
