

SOTA GlassBench inner tar header probe

ZIP-member prefixes are streamed through raw deflate and XZ to verify tar directories and NPZ trajectory headers.

target	stage	tar	npz	layout	extract	blocker
KA T=none	trajectory member prefix incomplete root=none; first NPZ=none probe=0; tar=0; npz-count=0; splits=none	0	0	0	0	trajectory payload
KA2D T=0.23	trajectory inner tar layout verified root=T0.23/; first NPZ=T0.23/test/N1290T0.23_202_tc05.npz probe=4194304; tar=1048576; npz-count=3; splits=test	1	1	1	0	streaming npz extraction polic
KA2D T=0.30	trajectory inner tar layout verified root=T0.30/; first NPZ=T0.30/train/N1290T0.30_3_tc01.npz probe=4194304; tar=1048576; npz-count=3; splits=train	1	1	1	0	streaming npz extraction polic
