

GlassBench direct-alpha cached curve

The cached structure-matched ladder is evaluated at the direct k-root while event-clock claims remain blocked.

target	direct-alpha stage	cached alpha curve status
KA2D T=0.23	cached direct alpha curve ready event clock bloc	structure=151; k_root=4.8; lags=8; latest Fs=0.368 crossed=1; crossing=tc40 at 1.5e+06; monotone=0 blocker=event_clock_trajectory; next=extract_particle_event_clock_at_direct_alp
KA2D T=0.30	cached direct alpha root upstream incomplete	structure=none; k_root=0; lags=0; latest Fs=0 crossed=0; crossing=none at 0; monotone=0 blocker=cached_direct_alpha_root; next=solve_cached_direct_alpha_anchor_before_cu

A cached alpha-threshold crossing is not a persistence/exchange event-clock inversion.
