

GlassBench threshold-sweep ensemble verdict

Temperature-level coverage is separated from single-row threshold sensitivity before PE inversion claims.

target	ensemble stage	coverage and threshold diagnostics
KA2D T=0.23	ensemble threshold sensitive blocked	structure=151; lags=8; min lags=3; sweep candidate=1 mean persistence ratio=2.03; max recross=0.256; robust clock=0 blocker=threshold_sensitivity_recrossing_and_repli; next=preregister_true_time_nonrecrossing_event_
KA2D T=0.30	ensemble threshold sweep coverage blocked	structure=3; lags=1; min lags=3; sweep candidate=0 mean persistence ratio=0; max recross=0; robust clock=0 blocker=insufficient_lag_coverage; next=extract_multi_lag_particle_caches_before_t
