

# Raw-curve ingestion contract

KA I/II fused validation requires machine-readable observable columns and uncertainty columns before quantitative inversion.

| observable                   | diagnostic                 | struct                   | unc | primary blocker | missing uncertainty columns        |
