

GlassBench late recovery time-code target

The finite-exchange recovery horizon is mapped onto the first GlassBench time-code cache that can test late recovery.

target	time-code stage	acquisition target
KA2D T=0.23	late recovery timecode target ready	structure=151; current=tc40 (1.5e+06); required lag=4.3e+07; target=tc50 (1.66e+08) target/required=3.86; steps needed=2; late observation ready=0; PE inversion=0 blocker=late_recovery_time_code_cache; next=extract_or_cache_glassbench_time_code_tc50_I
KA2D T=0.30	late recovery timecode target upstream incomplete	structure=3; current=none (0); required lag=0; target=none (0) target/required=0; steps needed=0; late observation ready=0; PE inversion=0 blocker=finit_e_exchange_envelope; next=complete_finite_exchange_falsification_envel
KA2D T=0.30	late recovery timecode target upstream incomplete	structure=none; current=none (0); required lag=0; target=none (0) target/required=0; steps needed=0; late observation ready=0; PE inversion=0 blocker=finit_e_exchange_envelope; next=complete_finite_exchange_falsification_envel

This is an executable data-acquisition target, not a thermodynamic or completed persistence-exchange inversion claim.
